GS2- Select environmentally friendly materials and components for buildings

construction

Course objectives: This training presents the fundamentals of circular economy and its application in construction, the sustainability principles which shape green and circular buildings, the principles of eco-design and the circular potential of materials.

Target group: Professionals in construction including engineers and project managers.

Format and Duration: 4 hours online + 20 hours onsite

Why this course? Participants will learn how to assess the potential of construction materials and components in relation to sustainable development and how to use the eco-design principles in the construction process.
